

LUKA GNSS RECEIVER

LIGHTER, SMALLER AND SMARTER

LUKA GNSS RECEIVER

Smaller, lighter, and smarter, the LUKA GNSS Receiver delivers calibration-free tilt compensation that is immune to magnetic disturbances. Surveyors no longer need to hold the pole upright, gaining unprecedented flexibility and efficiency in the field.

Powered by 1792 channels, LUKA can track full-constellation and multi-frequency for enhanced performance. It provides centimetre-level positioning accuracy, and fix in seconds even in challenging conditions. Built-in high-capacity lithium battery provides long time of field work, with a smart power display. It can be quickly charged in about 3 hours, and a power bank can be used during field surveying work. The rugged housing with IP68 protects the equipment from harsh environments.

The LUKA-TAP version integrates the Tersus satellite-based Precise Point Positioning service (TAP), enabling centimeter-level accuracy worldwide without relying on local RTK base stations or CORS. By directly receiving satellite-broadcast corrections such as ephemeris and clock errors, Oscar-TAP ensures high-precision positioning even in remote areas with poor or no network coverage, including oceans, deserts, mountains, and high altitudes.

Global satellite-based PPP service⁽¹⁾

Tersus TAP (PPP) Service

TAP is a satellite-based precise point positioning service developed by Tersus GNSS, which allows users to achieve centimeter-level high-precision positioning worldwide.

High-performance global solution

Enjoy 15mm horizontal and 30mm vertical accuracy in just 3 minutes worldwide.

High-availability & Redundancy

With redundant backups for all hardware and broadcast paths, ensure over 99.99% service availability.

The security and simplicity

Quick and secure access, with one-way data transfer of corrections to your receiver.

Seamless subscriptions

Remote one-click activation, with flexible subscription durations to suit your application needs.

Real-time via L-band from satellite

Global coverage

Stable coordinate frame

NUWA

Nuwa is a survey application software based on Android OS (Operating System), designed by and all rights reserved to Tersus GNSS Inc. Nuwa is simple, easy to use and has a friendly user interface. It is designed to work with the LUKA-TAP GNSS receiver, Oscar GNSS Receiver, and other receivers that support NMEA-0183. Nuwa provides extensive pre-defined coordinate systems that are used worldwide, and various data formats import and export like TXT, CSV, DXF, SHP, RAW, KML/KMZ, LandXML, RW5, HTML, and so on.

Pole Drop onto Concrete:	2m
Vibration:	MIL-STD-810G, FIG 514.6C-1

Software Support

Tersus Nuwa	
Note:	
(1)	TAP Service is available exclusively on the LUKA-TAP version.
(2)	The initialization time depends on various factors, including the number of satellites, observation time, atmospheric conditions, multi-path, obstructions, satellite geometry, etc.
(3)	The initialization reliability may be affected by atmospheric conditions, signal multipath, and satellite geometry.
(4)	IMU and built-in radio are optional, details refer to performance comparison table.
(5)	The working time of the battery is related to the working environment, working temperature and battery life. Up to 10 hours working in 4G/3G/2G network and Rover radio mode.
(6)	The actual size/weight may vary depending on the manufacturing process and measurement method.
